## Lung cancer causes the most cancer-related deaths in the US. <sup>1</sup>

Each year more than 20,000 Americans die from radon-induced lung cancer.<sup>2</sup>

Lung cancer accounts for 25.3% of all cancer deaths.<sup>1</sup>

In 2018, there will be an estimated 234,030 new lung cancer cases.<sup>1</sup>

## The five-year survival rate for late-stage lung cancer is 4.7%.<sup>1</sup>

57% of newly diagnosed lung cancer cases are late-stage.<sup>1</sup>

The five-year survival rate for lung cancer is 18.6%.1

16% of all lung cancer diagnoses are early-stage (localized).1

## 20% of those who die from lung cancer never smoked or used tobacco.<sup>2</sup>

Radon is the second leading cause of lung cancer.<sup>2</sup>

More women die from lung cancer than from breast, uterine, and ovarian cancers combined.<sup>3</sup>

In 2018 so far lung cancer has claimed 154,050 lives.<sup>1</sup>
